

LUTENDO MAUMELA

JUNIOR DEVOPS ENGINEER | SOFTWARE ENGINEER

079 152 5189 | lutendomaumela28@gmail.com | linkedin.com/in/lutendo-maumela | github.com/lutendomaumela

PROFESSIONAL SUMMARY

Computer Science graduate who built and shipped a production e-commerce platform on AWS from scratch — Flask API, Next.js frontend, Dockerised, deployed via GitHub Actions CI/CD, and monitored with Prometheus and Grafana. Independently debugged real cloud networking and infrastructure issues. Strong communicator who thrives in Agile teams and is driven by clean automation.

TECHNICAL SKILLS

Containers & Orchestration: Docker, Docker Compose, multi-stage builds, k3s (Kubernetes), NGINX, Helm, HPA

CI/CD & Automation: GitHub Actions, ArgoCD (GitOps), shell scripting, automated deploy pipelines

Cloud & IaC: AWS (EC2, RDS, S3, ECR, VPC, IAM, SSM Parameter Store), Terraform, CloudWatch

Monitoring: Prometheus, Grafana, AlertManager, prometheus_client instrumentation

Backend & Frontend: Python/Flask, Next.js 14, React, TypeScript, SQLAlchemy, Alembic, Unicorn

Databases: PostgreSQL, MySQL, Redis, Prisma ORM

Practices: Git, branch protection, pull request reviews, Agile/Scrum, clean code

DEVOPS PROJECT EXPERIENCE

DevOps Engineer (Personal Project) | ShopSwift — E-Commerce Platform | 2025 – Present

- Flask API + Next.js 14 frontend — products, cart, orders, JWT auth, full test suite
- Multi-stage Docker builds; Docker Compose for local dev with postgres healthchecks
- Terraform provisions entire AWS stack: VPC, EC2 t3.micro, RDS (private subnet), S3, ECR, IAM, SSM
- GitHub Actions pipeline: pytest + flake8 on PR, Trivy image scan, ECR push, SSH deploy on merge
- NGINX reverse proxy in front of Unicorn — rate limiting, security headers, proxy buffering
- Prometheus + Grafana on k3s; Flask instrumented with request Counter and latency Histogram
- All secrets in SSM Parameter Store (SecureString) — fetched at runtime, zero credentials in code
- Kubernetes HPA scales pods 1 to 5 on CPU; liveness and readiness probes on /health endpoint
- Diagnosed EC2-to-RDS connectivity failure via netcat; fixed Terraform security group without destroying RDS

SOFTWARE DEVELOPMENT EXPERIENCE

Full-Stack Developer | BenchmarkTrader — Trading Platform | Feb 2025 – Oct 2025

- Built trading platform with TypeScript, Express, React, Node.js, and Prisma ORM
- Broker-client matching system and automated trade execution with real-time status updates
- Containerised the app; participated in code reviews, Agile sprints, and pair programming

Software Developer | WildGraph — Wildlife Conservation System | Mar 2025 – May 2025

- Java app using graph theory and Dijkstra algorithm for conservation corridor detection
- Designed data structures for terrain mapping; collaborated on architecture and algorithm design

EDUCATION

Bachelor of Science in Computer Science and Informatics

University of Johannesburg, Gauteng | *Graduation Ceremony: 2026*

Relevant: Data Structures & Algorithms, Software Engineering, OOP, Database Systems, Computer Networks, OS

National Senior Certificate

Amaria Combined School, Limpopo | 2018

SOFT SKILLS

Calm under pressure — worked through multiple complex deployment failures methodically and resolved each one. Communicates technical blockers clearly without jargon. Proactively documents work so teammates can pick up where I left off. Asks the right questions before building rather than reworking later. Takes ownership from first commit to production.

KEY ATTRIBUTES

- **Automation-first:** writes the script before doing it manually
- **Infrastructure debugger:** diagnosed and fixed real AWS VPC, security group, and container issues
- **Fast learner:** self-taught DevOps stack through building a production-equivalent project
- **Detail-oriented:** clean code, structured logging, consistent naming, documented pipelines
- **Collaborative:** code reviews, Agile sprints, pair programming, knowledge sharing

ADDITIONAL INFORMATION

Languages: English (Fluent) | Venda (Native) **Citizenship:** South African — authorised to work in South Africa
